WHAT DO YOU GET WITH A PUSH BUTTON FIRED CORN AND A SUPER CORN CANNON?

- *All the hardware needed to mount cannon to post.
- *Three different barrel sizes.
- *Charge tank.
- *Air pressure gauge which lets you know how much air pressure is in the system at all times.
- *An electric solenoid valve, high limit relief valve (this electrical system is weather proof).

WHAT YOU NEED TO MAKE THE CANNON WORK:

- * An air compressor to supply air to cannon.
- *1/4" air hose which is used to supply the air from the air compressor to the charge tank on the cannon.
- *Need to provide 115 volt power from a grounded 3 prong extension cord. If you do not have the 115 volt power available to operate the cannon, the cannon can be powered by a 12-volt battery and inverter system. These components can be purchased as an option.

SUPER CANNON OFFERS ANOTHER FEATURE:

The super cannon comes with three barrel sizes which are large enough to shoot ears of corn. Larger barrel sizes are offered to allow you to shoot apples and miniature pumpkins with the cannon. These additional barrels are offered upon request.

REQUIREMENTS:

You will need a supply of compressed air to operate the cannon. We can supply you with the technical specifications of the air compressing system needed.
